

BUILD YOUR CAREER

Build your pathway to success in MANUFACTURING! YOU can get a good paying career and work your way through a pathway that you choose!

Start by taking technical classes in high-school or community college—you can earn a certificate or diploma and have the skills to start your career!

You can take more courses to earn an Associates of Applied Science degree which will put you in position to move up the career ladder (and many manufacturers will help pay for your degree)!

If you want to keep going, most of your courses will transfer to a four-year college or university, where you can earn a Bachelor’s degree—you may even find some courses online to help with your schedule.
